

W3C Disability

A) IE Page Reader;

Use the Page Reader Bar which could be found [here](#). Before you can use this component you have to install [MS Speech API](#). If you use Windows 2000, most likely, your system already has the necessary components. You also need at least one [Speech engine](#) installed. Speech engine is a "voice" that can be male or female, and can speak English or French or any other language. For more information, click [here](#).

B) Color selection;

Change the theme color of the website to make it more visible for those who had colour blind vision. You could find it beside the search box.

C) Text resizer;

- Resize the font size if you need it bigger or smaller to ease your reading. You could find it beside the search box.
